The applied RG 58 FME Xtra Low Loss coaxial cables are special PROCOM-designs having the lowest loss possible for RG 58-type coaxial cable: (below 0.3 dB per m at 900 MHz) and a very precise 50  $\Omega$  characteristic impedance. The cables are produced under continuous automatic control to ensure the high quality.

In the design of the FME-connectors the SWR has been minimized ensuring low mismatch loss and maximum power transfer.
